

# PRIMA STEEL PALISADE

## STEEL PALISADE

We have been manufacturing, supplying and installing steel palisade for many years and our name is synonymous with this superior fencing system, available with its variety of formed heads.

Production techniques of this product incorporate the ideas gained from close association over many years with the Public Service Industries, Government Departments, Architects, Civil Engineers and Contractors.

**Steel Palisade**

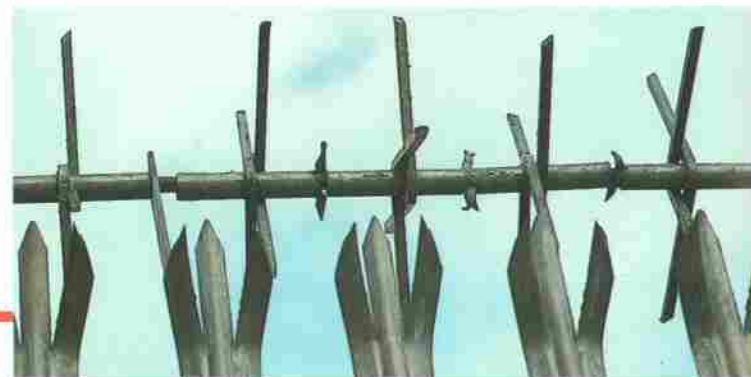

In areas where security, minimum maintenance and perimeter protection are required, steel palisade fencing gives maximum protection from intruders. The vertical sections may be riveted, bolted or welded to the horizontal members to produce a secure product, providing excellent performance at all heights.

The Pale may have three sharp points which will positively discourage any attempt to climb this type of fence, therefore giving maximum security whilst the round head is aesthetically acceptable to Urban environments.

Our Sales and Estimating Staff are at your service to discuss your particular requirements, whilst our up to date estimating system allows us to respond to your enquiries, received either by telephone, e-mail, fax or post, with speed and efficiency.

## TURNSPIKE

This unique anti-intruder system is for the tops of boundaries. Free-wheeling spikes formed on a barbed sleeve revolve around a continuous axle, incorporating an anti-jamming facility and thus precluding any stable access point. Special designs are available to secure downpipes and roof areas or to suit individual requirements.
