- » **Finish:** Galvanised or Power Coated to Requirements
- » **Colours Available:** Black/Yellow/Green/Red/White/Blue

Telescopic Posts and Drop Down Manal parking Barriers(SPF5975, SPF5975 & RT Range)

Telescopic parking post (also known as drop down security bollards) is easy to operate and a suitable parking barrier to entry.

The drop down posts is a manually operated parking post that simply slot into the ground. Fitting is by way of concreting the unit into the ground. The top then site in line with the ground, once the post has been retracted.

A user would lift up the flap on the top, unlock the post and lift the bollard, then lock it into place.

The metal posts come in galvanised or power coated finish in a full range of colours, and vinyl reflective strips.
